Skilled Worker Visa holder — requires visa sponsorship

PROFESSIONAL SUMMARY

Performance & Risk Analyst (Data Scientist) at Thames Water with 2+ years of experience in the UK water sector, delivering £2.3M in energy savings, lifting compliance from 10% to 85%, and preventing 1,000+ pollution incidents through data-driven interventions. Skilled in Python, SQL, Power BI, and Databricks, with a strong ability to translate complex analytics into clear, actionable decisions for senior stakeholders. Now seeking to bring this expertise to a Data Scientist, Senior Data Analyst, or Business Analyst role where data can drive measurable business outcomes.

TECHNICAL SKILLS

Tools: Azure, Databricks, Power BI, MySQL, SSMS, Power Automate, SAP, SCADA, SAP Business Objects, GitHub, Postman, Google Analytics, Genesys

Programming: Python (Pandas, NumPy, Scikit-Learn, Keras, TensorFlow), SQL, DAX, M Code, R, Java, JavaScript

Expertise: Asset Performance Modelling, Predictive Modelling, Anomaly Detection, Forecasting, ETL, Data Pipelines, Statistical Analysis, Data Visualisation, Report Automation, API Integration, Data Governance, Sprint Planning (DevOps)

PROFESSIONAL EXPERIENCE

Performance & Risk Analyst | Thames Water | United Kingdom | Nov 2024 – Present

- Led SCADA–SAP mapping workshops in Loddon Region, mapping 94% of alarms to assets and lifting compliance from 10% to 85% within one year; rollout to further regions in planning.
- Led weekly intervention calls covering 1,000+ waste pumping stations across London North, London South, and Mogden, triaging sites by criticality across 5 operational reports.
- Delivered £2.3M in energy savings (2025–26) through pumping station optimisation — formally recognised by the CEO.
- Built asset deterioration and performance models for 500+ pumping stations to forecast failures and inform strategic planning.
- Developed automated pipelines, dashboards, and anomaly detection systems (Python, SQL, Power BI, Databricks, Power Automate), cutting reporting time by 50% and increasing accuracy by 40%.
- Managed data ingestion across 6 platforms (SCADA, SAP, SAP Business Objects, Optima, LMC, iHub); built automated file-tracking alerts and a gateway restart script to maintain pipeline reliability.
- Led the Wet Well Cleaning Programme, scheduling preventative cleaning by criticality across the estate and preventing 1,000+ pollution incidents.
- Acted as interim manager on multiple occasions, leading a team of 4 during absences of up to two months.
- Self-trained in DevOps; now leads sprint planning for the team and upskills colleagues with no prior DevOps experience.

Planning Quality & Information (Data) Lead | Northumbrian Water Group | United Kingdom | May 2023 – Oct 2024

- Analysed large datasets from OFS, Maximo, Symology, and Genesys (SQL, Python) to deliver insights across permits, work orders, and customer service.
- Automated pipelines and reporting workflows via Python, API integration, and Power Automate, reducing manual effort by 90%.
- Designed and deployed Power BI dashboards with complex DAX queries for Planning, Scheduling, and Operations teams.
- Engineered a direct Genesys–Power BI API integration, saving £60,000 annually and boosting reporting productivity by 90%.
- Integrated weather forecasting APIs into performance reporting to support proactive decision-making.
- Led monthly upskilling sessions on Python, Power BI, and automation, boosting team productivity by 80%.

KEY PROJECTS

SCADA–SAP Asset Mapping | Thames Water

- Built an asset performance framework by mapping SAP hierarchies to SCADA telemetry, resolving a long-standing data gap across pumping stations and treatment works.
- Applied advanced analytics (Power BI, Databricks) to enhance incident detection, maintenance prioritisation, and risk management.
- Proof of concept raised compliance from 10% to 85%; multi-region rollout now in planning.

Asset Improvement Programme (AIP) | Thames Water

- Identified and targeted pumping stations lacking ultrasonic level sensors or backup controls, critical for performance monitoring and operational resilience.
- Coordinated crew deployment and tracked installations to completion, improving visibility across previously unmonitored sites.

Power BI Gateway & Data Pipeline Automation | Thames Water

- Identified a critical gap: Power BI gateway failures silently took down all reports with no alert.
- Wrote a monitoring script that auto-restarts the gateway if offline and sends a Teams alert, eliminating silent outages.
- Built a file-receipt tracker alerting the team when expected data feeds from SCADA, SAP, and other sources are not received on time.

Software Integration via Python, Power Automate & Power BI | Northumbrian Water Group

- ❑ Designed data flows between Maximo, OFS, OBIEE, and Symology, cutting report prep time from 3 hours to 10 minutes.
- ❑ Built Power BI dashboards with multi-source DAX visualisations, improving decision-making by 50% and reporting accuracy by 100%.

Real-Time Genesys–Power BI API Integration | Northumbrian Water Group

- ❑ Engineered a custom API connector replacing Azure middleware, saving £60,000 annually and increasing reporting productivity by 90%.
- ❑ Implemented robust error-handling and logging, improving error detection rates by 95%.

EDUCATION

MSc Data Science | University of Exeter | Sep 2021 – Sep 2022

BTech Computer Science | United College of Engineering and Management | Aug 2017 – Aug 2021

ACHIEVEMENTS & CERTIFICATIONS

-
- ❑ TensorFlow for Artificial Intelligence, Machine Learning and Deep Learning – Coursera
 - ❑ IBM Data Science Specialization – Coursera
 - ❑ First Place – CodeStorm Competition
 - ❑ First Place – i3Indya IoT Challenge
